Changes from Prior Year:

- Overall, the Plan cost increased from 60.67% to 60.96% of active member payroll.
 - Asset experience produced an investment loss, which increased the contribution rate by 0.39% of pay.
 - Demographic experience of the Plan was close to the actuarial assumptions, increasing the contribution rate for San Rafael by 0.01%.
 - Salary increases were lower than expected, reducing the contribution rate by 0.13% of pay. This smaller payroll over which to amortize the UAL led to a 0.31% of pay increase.
 - There was an expected change in amortization due to the phase-in of prior UAL gains. This reduced the contribution rate by 0.29%.

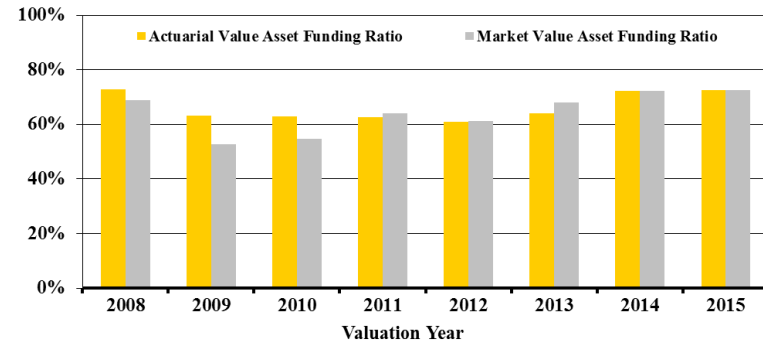

Marin County Employees' Retirement Association Actuarial Review and Analysis as of June 30, 2015 City of San Rafael

Employer Contribution Rate as a Percentage of Member Payroll

The employer contribution rate increased in fiscal year 2009 due principally to poor investment returns, and the deferred impact of these losses continued to be felt during the five year smoothing period. Changes in actuarial assumptions have also increased the employer rate.

Plan Funded Ratios

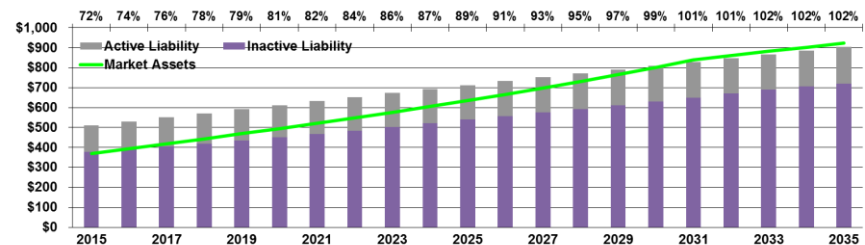

The above graph shows the funded ratio, both at market and actuarial value of assets. Beginning in 2014, the actuarial value of assets is equal to the market value. Funded ratios have trended down since 2007, but have improved recently, due to investment performance and additional contributions.

Projection of Employer Cost as a Percentage of Member Payroll

Provided assumptions are met, contribution rates are expected to decline slowly over the next few years as the current deferred investment gains are recognized.

Projection of Funded Ratio Based on Actuarial Liability

Provided assumptions are met, the funded ratio (shown by the numbers along the top of the graph) will improve as the unfunded liability and extraordinary loss are paid off. This graph and the prior graph assume a 15 year amortization period for the bulk of the UAL.

Actuarial Review and Analysis as of June 30, 2015

City of San Rafael

Actuarial Cost Method	Entry Age Normal to Final Decrement (GASB 67/68 compliant)
Amortization Method	Level % of pay; closed.
Remaining Amortization Period	17 years, fixed (15 years remaining as of June 30, 2015). Half of the extraordinary asset loss from FY 2009 is being amortized as a level percentage of payroll over a closed 30 year period, with 23 years remaining as of June 30, 2015. Any subsequent unexpected change in the unfunded actuarial liability after June 30, 2013 is amortized over 24 years (22 years for assumption changes) that includes a 5-year phase-in/out (3 years for assumption changes) of the payments/credits for each annual layer.
Asset Valuation Method	As of the June 30, 2014 valuation, assets are valued using the market value. The assets used to compute the UAL are the market value of assets, minus the value of any non-valuation contingency reserves.

Actuarial Economic Assumptions:

Long-Term Inflation Rate	2.75%
Real Rate of Return	4.50%
Nominal Rate of Return	7.25% (net of investment, but not administrative, expenses)
Projected Salary Increases	3.77% - 11.24%
Wage Inflation	3.00%
